

Satin glass LuxRaff® Antiscratch LuxFine® Antiscratch

Congratulations for choosing the high quality Antiscratch glass LuxRaff® and LuxFine®. Their high resistance to scratches and stains become the ideal solution for demanding applications such as kitchen counters, tables, floors and pavements,...

In order to enjoy for a long time in best conditions, we propose to follow these recommendations:

CLEANING AND MAINTENANCE

LuxRaff® and LuxFine® may be cleaned with the market's full range of cleaning products, except for those which are very aggressive or abrasive (ie. bleached). The choice of the sponge is very important to avoid damaging the surface: it is recommended to use a microfiber cloth or white stone (Magic Cleaner). Only use scourer if it's suitable for vitroceramics.

At each spot, its solution

To remove common limescale stains in the bathroom, use household soap or specific soap for baths. For the toughest stains you can use a specific limescale remover. To prevent lime deposits, dry the surface after cleaning.

In the kitchen best results are achieved with degreasing products, being also suitable the multipurpose products. For lime stains, follow the same instructions as for the bath.

Do not let the spots dry out.

The same spot is cleaned much better if removed in a few minutes than being left for hours. For dried stains, use the same cleaning product but we need to rub it more insistently, so it's essential not to use abrasive scouring pads.

With a good rinse, brightness is perfect.

LuxRaff® and LuxFine® have a special and characteristic luster. A good rinse is needed to be sure there are no traces of cleaning agent, causing the loss of this brightness. A final rinse with specific window cleaner highlights the brightness and avoids cloth marks.

Wet satined glass shows temporary visual effects, which disappear completely when dry.

.../...

A couple times a year.

LuxRaff® and LuxFine® remain unchanged over time, they don't degrade and are cleaned very easily. However, its daily use might diminish brightness due to imperceptible dirt remnants on surface.

It is therefore recommended to clean the Antiscratch glass line twice a year with *Radora Brillant*, particularly suited product to recover the original glass brightness (follow *Radora Brillant* instructions to achieve a homogeneous bright. Do not use more than 4 times per year).

PRECAUTIONS

Probably your LuxRaff® and LuxFine® glass have been tempered. This procedure makes them very solid, but still breakable. Avoid overload and pressure on edges that can cause spontaneous breakage. Prevent also hard knocks.

Similarly, its high resistance to scratches and spots is not unlimited, sometimes they can be visible. Most of them will disappear with cleaning, but we recommend some caution in daily use.

Heat resistance

Tempered glass has good heat resistance, but like any other material, it may be sensitive to sudden thermal shock. Caution is needed when moving pots and pans on the kitchen worktop. To avoid risks, better use a plate mat.

100% NATURAL, 100% RECYCLABLE

Glass is a totally natural product, to which we add the company's sensitivity and continued investment in environmental improvements. It's the sustainable ecological guarantee along with our environmental commitment: LuxRaff® and LuxFine® are produced according to Environmental Quality Management norm ISO 14001.
